### Conquer the Night

Conquer the Night – It is a moonless night and you are flying over a featureless desert, surrounded by mountains, and things go black! Electrical failure, you can fumble around for that old flashlight, or you can Conquer the Night with FLITELite™, a new high intensity light source that snaps on to your headset mic.

Touch it once and FLITELite™ will beam bright where you want it. Touch it again for lower intensity and once again to turn it off – or simply wait, FLITELite™ will auto off in one minute. Its microprocessor uses software that advances highly efficient LED systems to the next level. Developed by Momentum Interactive with NASA STATOP and NAFI Master CFIs assistance, the world class FLITELite™ engineering team developed and integrated LiteTouch™ technology for hands free operations and incorporated a LiteDetect™ sensor to shut itself off in bright light, saving precious battery life so it is there when you need it most. FLITELite™ is the first smart light that is custom fit to a flex boom headset.

FLITELite™ is ready for shipment at OSHKOSH Airventure® 2006. Visit the FLITELite™ crew in Hangar C Booth 3086. Can't make it to OSH? Go online and order yours by 1 August 2006 and receive special show pricing with FREE shipping! . Aviators trust FLITELite™. See FLITELite™ in action at [www.FLITELITE.com](http://www.FLITELITE.com)
